

juwi solar Inc.

Position – Project Manager

Starting - Immediately

Location – Boulder, CO

Reports to – Director of Project Management

juwi solar Inc. (JSI) based in Boulder, Colorado, and majority-owned by juwi Holding AG, is a developer and turnkey installer of solar power plants throughout North America. JSI's main focus is the development, construction and operation of utility scale power plants (1MW or larger).

JSI has established an aggressive target for bringing solar power on line each year and JSI is looking to fill the position of Project Manager. The Project Manager will be responsible for assuring that all steps of development and construction are completed in a timely and cost effective manner. The project manager will be charged with managing and conducting analysis and design of electrical and structural components of solar projects, support on off-take agreements, executing construction and environmental permits, managing subcontractors and overall project oversight. In addition, the Project Manager will support the company's business development efforts by supporting bid proposals and working with potential off-takers, banks, tax equity investors and associated consultants. JSI is looking for a Project Manager with excellent communication skills, both orally and verbally. The position will be based in Boulder, Colorado and will report to the Director of Project Management.

Principal Position Description:

- Oversight of Greenfield development projects with focus on technical, commercial and selective economic components of the project.
- Manages day-to-day operational aspects of project, enforcing JSI's project standards while minimizing company exposure to development and installation risks.
- Understand all permitting and assures that project receives and maintains all permits required for the development of the project.
- Support the technical design of projects including electrical and structural layouts.
- Tracks and reports team hours and expenses and maintain accurate oversight of project budget.
- Manage the work performed by consultants and subcontractors working on various phases of the project.
- Ensure the development and implementation of projects in an effective and economical manner by proactively problem solving as required.
- Identify land parcels and conduct preliminary site analysis including land assessment, interconnection with distribution and transmission and permit situation.
- Review and submit transmission and interconnection applications.
- Maintain close coordination with JSI's construction group to ensure that the project is performed properly in terms of quality, schedule and budget in line with the development plan.
- Analyze and support the execution of power purchase agreements with off-takers.
- Conduct preparation of request for proposals (RFP's).
- Monitor and keep updated the overall project development schedule integrating the EPC schedule with the schedule of permits, authorizations and other contractual obligations.
- Support the construction management team regarding logistics for onsite construction.
- Makes sure that agreed corrective actions to mitigate the effects of variances on schedule and budget are planned and carried out.

Position Requirements:

- BA/BS degree, MS or MBA preferred, two years of relevant experience;
- Skilled in MS Excel, PowerPoint, Word and Project;
- Analytical Skills for problem solving;
- Advanced knowledge of PV systems a plus;
- Strong interpersonal skills, excellent communication and coordination skills.
- Autonomous: take initiative and organize work in an independent manner.
- Team player, stress-resistant.
- Frequent project related travel is expected, a willingness to work flexible hours; and
- Desire to grow professionally.
